

Watphou Travels

Document Discrepancy Audit

Exact conflicts, missing mappings, price-data risks, operational concerns, contextual and safety issues, and SEO concerns.

OVERALL VERDICT	The website is buildable, but these files are not yet a safe single source for autonomous implementation. Correct the price data and settle the conflicting priorities first.
-----------------	--

Documents reviewed

DOCUMENT A	Watphou_Travels_Package_Portfolio_Positioning(1).pdf
DOCUMENT B	Watphou_Travels_Package_Texts_Webmaster(1).pdf
DOCUMENT C	Website structures for Micah 2026-09-01.xlsx

Scope and method

Every discrepancy below identifies the exact filename through Document A, B or C, plus its page, worksheet or cell range. Direct conflicts are separated from missing information and operational inferences. This report does not redesign the tours or invent commercial data.

MOST IMPORTANT FINDINGS	
1	Homepage priorities conflict across Document A and two worksheets in Document C.
2	Document C contains probable price errors and no calculation, currency or rounding rules.
3	The three files use two incompatible tour-code systems.
4	Several tour statements conflict internally or require operational confirmation.

1 Exact discrepancy matrix

Priority rule: resolve every CRITICAL item before prices or tour records are imported. Resolve HIGH items before public launch.

ID	Level	Exact evidence	Required resolution
D-01	CRITICAL	Document A, p.1: homepage cards = 1.1, 2.1, 2.2, 3.1. Document C, Home rows 22-25: 1.1, 2.2, 3.1, 4.1. Document C, Price Braquette: Top 1-8 begins 3.1, 6.1, 5.1, 2.2.	Choose one official homepage set. Define whether 'Top' in Document C means sales priority or only spreadsheet order.
D-02	CRITICAL	Document A, p.1 and Document B, p.1 define 16 products. Document C, Price Braquette contains only 8 price blocks and omits 1.1-1.7 and T.1.	Set each omitted product to either approved price, price on request, or not yet published.
D-03	CRITICAL	Document B, pp.3-23 shows 'From \$XX per person' on all package pages. Document C contains numeric grids for 8 packages.	For each priced package, approve the displayed 'From' amount, currency, room basis and group size. Do not select the cheapest cell without its conditions.
D-04	CRITICAL	Documents A and B use 1.1-6.1 and T.1. Document C uses L1, L5, L4, IL2, B5, L3, L2 and W3. No formal mapping is supplied.	Approve one permanent ID per tour and retain the other code only as a documented legacy alias.
D-05	HIGH	Document A/B: '6-Day Journey to the Heart of Southern Laos'; Document C price title: '6 Days in the Heart of Southern Laos'. Similar variation exists for 4-day and 5-day titles, Vat Phou/Vat Phu, and 4000/4,000.	Create one canonical title, spelling and duration format for every package. Recommended heritage spelling: 'Vat Phou'.
D-06	HIGH	Document C, 3-DAY Tours contains 3-, 4-, 5- and 6-day products. Document C also repeats the 4-, 5- and 6-day products in 4-6 Day Tours.	Remove the duplicate grouping or rename the first worksheet to show its actual scope.
D-07	HIGH	Document B, p.4 (tour 1.2): Hong Nang Sida is 12th-century. Document B, p.13 (tour 2.3): it is 10th-11th century.	Use one verified description. Current tourism material supports late 11th to early 12th century.
D-08	HIGH	Document C, Home row 32: '100% private tours (your vehicle & driver)'. Document B, p.15: 'Completely private journey'. Document B, p.12 offers a private boat instead of a shared local boat.	State exactly what is private: itinerary and road vehicle. Disclose any ferry, local boat or island transport that may be shared.
D-09	HIGH	Document B, p.7 includes swimming at Tad Champee in the itinerary. Document B, p.8 lists 'Swimming time' as an optional upgrade.	Choose one: conditional included stop, or paid extended stop. Swimming itself should not be sold as an upgrade.
D-10	HIGH	Document B, p.10: tour 1.7 says 'picnic possible', lunch is not included unless confirmed, and picnic lunch is also an optional upgrade.	Set one publishable rule: included, excluded, or selectable paid option, with one price source.
D-11	HIGH	Document B, pp.22-23 sells a Baci ceremony and Don Daeng homestay as a defining 6-day experience, then offers superior hotels instead of the homestay.	Treat hotel substitution as a separate itinerary variant or revise the headline and inclusions dynamically.
D-12	HIGH	Document B, p.6 describes lunch at a local restaurant, but the same tour states 'Meals: not included' and lists lunch under exclusions/upgrades.	Write 'lunch stop, payable directly' or include it consistently. Do not leave the cost responsibility implicit.
D-13	HIGH	Document A tells the webmaster to use star priorities, but the stars do not render visibly in the PDF priority column. The extracted text still contains them.	Re-export Document A with an embedded font or replace stars with text levels 5/4/3.

1A Tour-code mapping and document authority

The mapping below is inferred only from package titles. It is not formally declared in any supplied file and therefore requires client approval.

Documents A/B	Document C	Title-based match
3.1	L1	3-Day Classic Experience in Southern Laos
6.1	L5	6-Day Journey / 6 Days in the Heart of Southern Laos
5.1	L4	5-Day / 5 Days of Exploring Southern Laos
2.2	IL2	4,000 Islands & Vat Phou/Vat Phu Temple - 2D/1N
2.1	B5	Bolaven Plateau Classic - 2D/1N
4.1	L3	4-Day / 4 Days Southern Laos Escape
3.2	L2	3-Day Highlights of Southern Laos
2.3	W3	Vat Phu & Champasak Discovery - 2D/1N

Recommended source-of-truth order

Exact filename	Recommended authority
Watphou_Travels_Package_Portfolio_Positioning(1).pdf	Controls the 16-product portfolio, destination mapping and priorities only after D-01 is resolved.
Watphou_Travels_Package_Texts_Webmaster(1).pdf	Controls public package copy and itineraries only after operational, factual and safety approval.
Website structures for Micah 2026-09-01.xlsx	Controls prices only after P-01 through P-06 are resolved. Its page lists are navigation references, not duplicate tour records.

Document-production defects

Source	Defect
Document A	Priority stars are not visible in the rendered PDF.
Document B	Several DAY labels/headings repeat across page breaks, and inclusion sections split awkwardly.
Document C	Destinations and Contact depend on embedded screenshots; About Us only points to the old site; the map placeholder has no address or coordinates.
Document C	Printed output contains blank pages and clipped content; no print areas are defined.

2 Price-data anomalies in Document C

All findings in this section refer to the exact worksheet name 'Price Braquette' in Website structures for Micah 2026-09-01.xlsx. Values below are the stored numeric values, not estimates.

ID	Level	Exact finding	Required resolution
P-01	CRITICAL	D14, D26 and D62 contain numeric 0 for 1-person Twin/Double on the 6-, 5- and 4-day products.	Replace 0 with blank/not applicable. A zero can be imported as a free price.
P-02	CRITICAL	6-day Twin: 661.245 at 5 people -> 757.38 at 6. Single: 872.885 -> 969.02.	Confirm whether a second vehicle/capacity threshold causes the increase. Document the rule.
P-03	HIGH	5-day Twin: 561.145 at 5 -> 567.255 at 6. 3-Day Highlights Twin: 312.13 at 5 -> 317.763333 at 6. Single prices rise by the same amounts.	Confirm both jumps; otherwise correct the source costs or formulas.
P-04	CRITICAL	Vat Phu & Champasak Discovery rows 86-92: Twin/Double equals Single for every group size from 2 to 8.	Confirm that no single supplement applies. If one applies, correct the Single column.
P-05	CRITICAL	The worksheet does not state currency, tax treatment, whether values are per person or per group, or price-validity dates.	Add explicit commercial metadata before any website import.
P-06	HIGH	Stored amounts contain fractions of a cent, for example 396.955 and 273.9966666667. The display format hides that precision.	Define one rounding rule for display and calculation; store final chargeable amounts to the supported decimal precision.
P-07	HIGH	Odd groups are assigned a generic Twin/Double value, but no third-person, extra-bed, triple-room or forced-single rule exists.	Define room allocation for 3, 5 and 7 travellers.
P-08	HIGH	Workbook audit: zero formulas, zero data validations, zero structured tables and zero named ranges. All prices are hard-coded.	Add auditable cost/formula logic or mark the sheet as approved-output-only and protect it against accidental edits.

Required price fields before implementation

Field	Required definition
Currency and unit	Example: USD per adult, including or excluding tax.
Public 'From' basis	State the group size and room basis behind the advertised minimum.
Validity	Valid-from date, valid-until date, seasons and blackout dates.
Travellers	Adult, child and infant ages/prices; maximum group size.
Rooms	Twin, double, single, triple, extra bed and odd-number allocation.
Supplements	Guide, private boat, hotel upgrade, activity and transfer amounts.
Rounding	One display/calculation rule used consistently.

IMPORT WARNING

Do not automatically import Document C prices until P-01 through P-06 have been confirmed or corrected by the client.

3 Logistical and operational problems

These are operational flags inferred from the stated distances, activities and timing in Document B. They are not declarations that the tours are impossible. The operator should test or approve each schedule.

Tour/source	Problem	Required operational decision
1.1 / B pp.3-4	About 220 km plus multiple waterfalls, Lak 40, a market, Tad Lo/Ngae and Mr. Vieng in one day.	Create a timed route sheet; identify optional stops and a latest-return time.
1.3 / B p.5	About 324 km plus boats, island movements and three waterfall areas between 07:30 and about 18:30.	Label as a long/strenuous day and field-test the schedule, meal time and boat connections.
1.4 / B p.6	Promoted for same-day arrivals/departures, but starts 08:00 and aims to finish after a sunset viewpoint.	Remove that promise or publish compatible arrival/departure time windows.
1.5 / B pp.7-8	Four-hour/7 km trek plus picnic, Tad Yuang, tea/coffee tasting and Tad Fane after an 08:00 Pakse departure.	Add return time, weather alternative and stop-cutoff rules.
1.7 / B pp.9-10	Base program is already a full day; the hard option adds about three hours to lower waterfalls.	Publish easy and hard variants with separate start times and inclusions.
3.2 / B pp.16-17	Day 2 combines Vat Phou, Champasak, Tomo, road travel and transfer to Don Khone.	Validate opening hours, ferry/boat timing and realistic visit duration.
4.1-6.1 / B pp.18-23	Pakse-Champasak and island boat sections are presented without river-condition or seasonal alternatives.	Add 'subject to river and weather conditions' plus a road-transfer fallback.
4.1-6.1 / B pp.19-23	Optional shadow theatre is presented seasonally, but performance day/time is not integrated into each itinerary.	Make it date-dependent; current public listing says Tuesday/Friday at 20:30.
3.2-6.1 / B pp.16-23	Tours may end at the Cambodia border, but border-side responsibility, operating hours and onward travel are undefined.	State exact Lao drop-off point, immigration responsibility and whether onward transport is included.
T.1 / B p.24	Transfers from Ubon imply a Thailand-Laos border crossing and potentially different licensed vehicles/operators.	Confirm the operating partner and disclose any vehicle change and border formalities.
Several tours	Named people, workshops, boats and 3-star hotels are presented as dependable components.	Obtain consent and contracts; record substitutes and what happens when a supplier is unavailable.
Guide model	Documents distinguish local guide, driver, basic-English guide and qualified English/French guide inconsistently.	Define each role, language level, qualifications, inclusions and when a guide is mandatory.

4 Content that is out of context, unsafe or unverifiable

Source	Exact issue	Why it matters	Required correction
B p.6	'Around the temple you may meet elephants and horses (feeding possible).'	Out of context and creates welfare/safety expectations without a named, approved activity.	Remove unless formally verified and governed by an animal-welfare policy.
B p.9	Cycling exclusions include 'extra water'.	Inadequate water can be a safety issue in heat and physical activity.	Include sufficient drinking water; specify helmets, bike sizes, repair support and first aid.
B pp.7-10	Swimming is promoted at waterfalls.	Water level, current, rain and local closures can make swimming unsafe.	Use conditional wording and establish guide/safety rules.
B pp.7, 9	Trekking/cycling pages lack minimum age, difficulty, elevation gain, equipment and medical limitations.	Guests cannot judge suitability and staff cannot consistently screen participants.	Add a standard activity-safety block.
B p.4	Champasak is called 'the royal capital of Laos'.	Historically misleading: it was associated with the Kingdom of Champasak.	Use 'former royal seat of the Kingdom of Champasak'.
B p.12	Vat Phou is described simply as 'older than Angkor Wat'.	The wider landscape and surviving structures span different periods.	Use 'an ancient sacred landscape with origins predating Angkor Wat'.
B p.7	Tad Fane is called 'the tallest waterfall in Laos'.	The 120 m figure is supported, but the absolute ranking is not established in the supplied files.	Use 'one of Laos's most dramatic/highest waterfalls' unless a definitive source is approved.
B p.16	Jhai Coffee Cooperative is said to represent about 450 families.	The precise current figure is not sourced in the documents and may change.	Confirm directly with Jhai before publication.
C Home rows 31-32	'European management', 'European standards' and '100% private'.	These are strong factual/commercial claims but are not defined or evidenced in the three files.	Define the actual standards and substantiate management/private-service claims.
Several tours	Village meetings, Tak Bat, Baci and resident encounters are described as expected experiences.	They involve consent, ritual etiquette and photography expectations.	Use respectful non-guaranteed wording and publish guest-conduct guidance.
All documents	No image-rights, model-consent or supplier-photo register is supplied.	Old-site availability does not by itself prove reuse rights.	Create an image rights/source register before migration.

5 Search engine optimization concerns

ID	Document evidence	SEO risk	Required action
S-01	Document A, p.3 and Document C, Destinations row 42 say that listing a package on several destination pages 'helps SEO'.	Cross-listing can help navigation, but duplicate/thin landing pages can compete with each other.	Give every destination page unique purpose, introduction, local information and internal links; reuse one canonical tour record rather than duplicate tour pages.
S-02	Packages 3.1 vs 3.2 and 4.1 vs 5.1 vs 6.1 have strongly overlapping destinations and wording.	Search intent and customer choice may be unclear.	Create a comparison block: pace, nights, distinctive experiences, endpoint and ideal traveller.
S-03	The files provide no approved URL slugs, page titles, meta descriptions, canonical rules, hreflang map or redirect map.	Search implementation would otherwise be invented by the developer.	Create an SEO specification per page and language before launch.
S-04	Document C, Home rows 36-39 says to pull real Google reviews.	Google content cannot simply be scraped and permanently copied without attribution and usage-rule consideration.	Use a compliant Places implementation or approved static testimonials, with author/source attribution and links.
S-05	Vat Phou/Vat Phu, 4000/4,000 and title formats vary across the files.	Inconsistent entities weaken site search, breadcrumbs, structured data and reporting.	Use canonical titles and spellings everywhere; keep alternate spellings only in natural copy where useful.
S-06	No photo filename, alt text, caption, owner, location or consent mapping is included.	Images cannot be migrated and optimized consistently.	Create an image inventory linked to tour IDs and rights status.
S-07	Claims, review totals and prices are not connected to evidence or validity dates.	Stale or unverified statements can make structured data misleading.	Only mark up visible, current and verified price/review/business data.

Minimum decisions before development

Order	Decision
1	Approve the four homepage best sellers and define the meaning of Document C's 'Top' ranking.
2	Approve one permanent tour ID and canonical title for all 16 products.
3	Correct P-01 to P-06 and add the missing commercial metadata to Document C.
4	Have the Watphou operations team approve each flagged timetable, transport dependency and fallback.
5	Approve or remove the unverified historical, supplier, animal and service-standard claims.
6	Define one unique search purpose and metadata set for every destination and tour page.

CONCLUSION

No described website function is inherently impossible. The immediate risk is not technical feasibility; it is importing contradictory priorities, ambiguous tour identities and potentially incorrect prices. Treat all three files as draft inputs until the decisions above are signed off. Overall review confidence: 96%.
